

Laravel 10 Learning Plan

Day 1: Authentication with Laravel UI

Set up authentication using the Laravel UI package. Implement user registration, login, password reset via email, logout, password change, email verification, and protect routes with middleware.

Day 2: E-commerce CRUD Operations

Create tables for categories, subcategories, and products. Implement CRUD (Create, Read, Update, Delete) operations for an e-commerce site, ensuring proper relationships between tables.

Day 3: Contact Us Form

Build a "Contact Us" form that sends an email to the admin role when submitted.

Day 4: Roles and Permissions with Spatie

Use the Spatie Laravel Permission package to manage roles and permissions. Restrict /admin/user and /admin/role routes to the admin role only. Create three default roles: user, admin, and manager. Allow admins to create roles and assign permissions. Managers can create and update categories, subcategories, and products but cannot delete them. Only admins can delete.

Day 5: Real-Time Notifications with Pusher

Implement a real-time bell icon notification system using Pusher. Send notifications to admins (not users or managers) when a product is created.

Day 6: Product Listing with Search and Pagination

Display product cards on the homepage (/) with a search bar, an "Enter" button, and pagination.

Day 7: Export Product Data

Export product table data (name, price, cross_price, stock_qty, category, subcategory) to CSV, PDF, and Excel formats.

Day 8: Social Login with Laravel Socialite

Enable user login using Google and GitHub accounts via Laravel Socialite.

Laravel 11 Learning Plan

Day 9: Authentication with Laravel UI

Set up authentication using Laravel UI. Implement registration, login, password reset via email, logout, password change, email verification, and route protection with middleware.

Day 10: E-commerce CRUD Operations

Create tables for categories, subcategories, and products. Implement CRUD operations for an e-commerce site with proper table relationships.

Day 11: Contact Us Form

Create a "Contact Us" form that sends an email to the admin role upon submission.

Day 12: Roles and Permissions with Spatie

Use Spatie Laravel Permission to manage roles and permissions. Restrict /admin/user and /admin/role routes to admins only. Create default roles: user, admin, manager. Admins can create roles and assign permissions. Managers can create and update categories, subcategories, and products but cannot delete them. Only admins can delete.

Day 13: Real-Time Notifications with Laravel Reverb

Implement a real-time bell icon notification system using Laravel Reverb. Notify admins (not users or managers) when a product is created.

Day 14: Product Listing with Search and Pagination

Display product cards on the homepage (/) with a search bar, an "Enter" button, and pagination.

Day 15: Export Product Data

Export product table data (name, price, cross_price, stock_qty, category, subcategory) to CSV, PDF, and Excel formats.

Day 16: Social Login with Laravel Socialite

Enable user login using Google and GitHub accounts via Laravel Socialite.

Laravel 10 + Livewire Learning Plan**Day 17: Authentication with Laravel UI**

Set up authentication using Laravel UI. Implement registration, login, password reset via email, logout, password change, email verification, and middleware for route protection.

Day 18: E-commerce CRUD with Livewire

Create tables for categories, subcategories, and products. Implement CRUD operations using Livewire, including delayed search, "show X entries" dropdown, view/edit/delete via modals, and multi-select delete with checkboxes.

Day 19: Contact Us Form

Build a "Contact Us" form using Livewire that sends an email to the admin role.

Day 20: Roles and Permissions with Spatie

Use Spatie Laravel Permission to manage roles and permissions. Restrict /admin/user and /admin/role routes to admins. Create default roles: user, admin, manager. Admins can create roles and assign permissions. Managers can create and update categories, subcategories, and products but cannot delete them. Only admins can delete.

Day 21: Real-Time Notifications with Pusher

Implement a real-time bell icon notification system using Pusher and Livewire. Notify admins (not users or managers) when a product is created.

Day 22: Advanced Product Listing

Display product cards on the homepage (/) with Livewire. Include a search bar, category checkboxes, sort-by options (Newest First, Lowest Price First, Highest Price First), price range inputs (min/max), an "Enter" button, and pagination.

Day 23: Export Product Data

Export product table data (name, price, cross_price, stock_qty, category, subcategory) to CSV, PDF, and Excel formats using Livewire.

Day 24: Social Login with Laravel Socialite

Enable user login using Google and GitHub accounts via Laravel Socialite with Livewire.

Day 25: Complete User List Page

Implement the user list page (user-list.html) from the provided path, integrating it with Laravel and Livewire for dynamic user management.

Day 26: Complete Roles Page

Implement the roles page (roles.html) from the provided path, integrating it with Laravel and Livewire for role and permission management.

Laravel 11 + Livewire Learning Plan**Day 27: Authentication with Laravel UI**

Set up authentication using Laravel UI. Implement registration, login, password reset via email, logout, password change, email verification, and middleware for route protection.

Day 28: E-commerce CRUD with Livewire

Create tables for categories, subcategories, and products. Implement CRUD operations using Livewire, including delayed search, "show X entries" dropdown, view/edit/delete via modals, and multi-select delete with checkboxes.

Day 29: Contact Us Form

Build a "Contact Us" form using Livewire that sends an email to the admin role.

Day 30: Roles and Permissions with Spatie

Use Spatie Laravel Permission to manage roles and permissions. Restrict /admin/user and /admin/role routes to admins. Create default roles: user, admin, manager. Admins can create roles and assign permissions. Managers can create and update categories, subcategories, and products but cannot delete them. Only admins can delete.

Day 31: Real-Time Notifications with Laravel Reverb

Implement a real-time bell icon notification system using Laravel Reverb and Livewire. Notify admins (not users or managers) when a product is created.

Day 32: Advanced Product Listing

Display product cards on the homepage (/) with Livewire. Include a search bar, category checkboxes, sort-by options (Newest First, Lowest Price First, Highest Price First), price range inputs (min/max), an "Enter" button, and pagination.

Day 33: Export Product Data

Export product table data (name, price, cross_price, stock_qty, category, subcategory) to CSV, PDF, and Excel formats using Livewire.

Day 34: Social Login with Laravel Socialite

Enable user login using Google and GitHub accounts via Laravel Socialite with Livewire.

Day 35: Complete User List Page

Implement the user list page (user-list.html) from the provided path, integrating it with Laravel 11 and Livewire for dynamic user management.

Day 36: Complete Roles Page

Implement the roles page (roles.html) from the provided path, integrating it with Laravel 11 and Livewire for role and permission management.

Laravel 10 + API + Vue.js Learning Plan**Day 37: Authentication with Laravel Sanctum**

Set up authentication using Laravel Sanctum for an API. Implement registration, login, password reset via email, logout, password change, email verification, and middleware for route protection.

Day 38: E-commerce CRUD with Vue.js

Create tables for categories, subcategories, and products. Build a RESTful API for CRUD operations and integrate with a Vue.js frontend. Include delayed search, "show X entries" dropdown, view/edit/delete via modals, and multi-select delete with checkboxes.

Day 39: Contact Us Form

Create a "Contact Us" form in Vue.js that sends an email to the admin role via the Laravel API.

Day 40: Roles and Permissions with Spatie

Use Spatie Laravel Permission in the API to manage roles and permissions. Restrict /admin/user and /admin/role endpoints to admins. Create default roles: user, admin, manager. Admins can create roles and assign permissions. Managers can create and update categories, subcategories, and products but cannot delete them. Only admins can delete.

Day 41: Real-Time Notifications with Pusher

Implement a real-time bell icon notification system using Pusher and Vue.js. Notify admins (not users or managers) when a product is created via the API.

Day 42: Advanced Product Listing

Display product cards on the homepage (/) with Vue.js. Include a search bar, category checkboxes, sort-by options (Newest First, Lowest Price First, Highest Price First), price range inputs (min/max), an "Enter" button, and pagination via the API.

Day 43: Export Product Data

Export product table data (name, price, cross_price, stock_qty, category, subcategory) to CSV, PDF, and Excel formats via the API, integrated with Vue.js.

Day 44: Social Login with Laravel Socialite

Enable user login using Google and GitHub accounts via Laravel Socialite and Sanctum, integrated with Vue.js.

Day 45: Complete User List Page

Implement the user list page (user-list.html) from the provided path, integrating it with Laravel 10, Sanctum, and Vue.js for dynamic user management.

Day 46: Complete Roles Page

Implement the roles page (roles.html) from the provided path, integrating it with Laravel 10, Sanctum, and Vue.js for role and permission management.

Laravel 11 + API + Vue.js Learning Plan**Day 47: Authentication with Laravel Sanctum**

Set up authentication using Laravel Sanctum for an API. Implement registration, login, password reset via email, logout, password change, email verification, and middleware for route protection.

Day 48: E-commerce CRUD with Vue.js

Create tables for categories, subcategories, and products. Build a RESTful API for CRUD operations and integrate with a Vue.js frontend. Include delayed search, "show X entries" dropdown, view/edit/delete via modals, and multi-select delete with checkboxes.

Day 49: Contact Us Form

Create a "Contact Us" form in Vue.js that sends an email to the admin role via the Laravel API.

Day 50: Roles and Permissions with Spatie

Use Spatie Laravel Permission in the API to manage roles and permissions. Restrict /admin/user and /admin/role endpoints to admins. Create default roles: user, admin, manager. Admins can

create roles and assign permissions. Managers can create and update categories, subcategories, and products but cannot delete them. Only admins can delete.

Day 51: Real-Time Notifications with Laravel Reverb

Implement a real-time bell icon notification system using Laravel Reverb and Vue.js. Notify admins (not users or managers) when a product is created via the API.

Day 52: Advanced Product Listing

Display product cards on the homepage (/) with Vue.js. Include a search bar, category checkboxes, sort-by options (Newest First, Lowest Price First, Highest Price First), price range inputs (min/max), an "Enter" button, and pagination via the API.

Day 53: Export Product Data

Export product table data (name, price, cross_price, stock_qty, category, subcategory) to CSV, PDF, and Excel formats via the API, integrated with Vue.js.

Day 54: Social Login with Laravel Socialite

Enable user login using Google and GitHub accounts via Laravel Socialite and Sanctum, integrated with Vue.js.

Day 55: Complete User List Page

Implement the user list page (user-list.html) from the provided path, integrating it with Laravel 11, Sanctum, and Vue.js for dynamic user management.

Day 56: Complete Roles Page

Implement the roles page (roles.html) from the provided path, integrating it with Laravel 11, Sanctum, and Vue.js for role and permission management.

Advanced Tasks

1. **Chat System (Laravel 10 + Pusher + Livewire)**
Build a real-time chat system using Laravel 10, Pusher, and Livewire. Allow users to send and receive messages instantly with a clean UI.
 2. **Chat System (Laravel 11 + Reverb + Livewire)**
Build a real-time chat system using Laravel 11, Laravel Reverb, and Livewire. Support instant messaging with a user-friendly interface.
 3. **Chat System (Laravel 10 + Pusher + Vue.js + API)**
Create a real-time chat system using Laravel 10, Pusher, and a Vue.js frontend with a RESTful API. Enable users to send and receive messages in real time.
 4. **Chat System (Laravel 11 + Reverb + Vue.js + API)**
Develop a real-time chat system using Laravel 11, Laravel Reverb, and a Vue.js frontend with a RESTful API. Support instant messaging with a modern UI.
-

Additional Tasks to Become a Professional Laravel Developer

These tasks are designed to build advanced skills, deepen your understanding of Laravel, and prepare you for real-world projects.

Beginner to Intermediate Tasks

5. Shopping Cart System (Laravel 10)

Build a shopping cart system where users can add products, update quantities, and remove items. Store cart data in the session or database and display the cart on a dedicated page.

6. Order Management (Laravel 11)

Create an order system where users can place orders from the cart. Implement order creation, order history, and order details pages for users and admins.

7. File Uploads with Validation (Laravel 10 + Livewire)

Add file upload functionality (e.g., product images) to the e-commerce site using Livewire. Include validation for file types and sizes, and store files securely.

8. API Rate Limiting (Laravel 11 + Sanctum)

Implement rate limiting for your API endpoints using Laravel Sanctum to prevent abuse. Test with Postman or a Vue.js frontend.

9. Unit Testing Basics (Laravel 10)

Write unit tests for the authentication system (e.g., login, registration) using PHPUnit or Pest. Ensure at least 80% test coverage for these features.

Intermediate to Advanced Tasks

10. Multi-Language Support (Laravel 11)

Add multi-language support to the e-commerce site using Laravel's localization features. Allow users to switch between at least two languages (e.g., English and Spanish).

11. Payment Gateway Integration (Laravel 10)

Integrate a payment gateway (e.g., Stripe or PayPal) to process payments for orders in the e-commerce site. Handle success and failure scenarios.

12. API Authentication with JWT (Laravel 11 + Vue.js)

Implement JSON Web Token (JWT) authentication for the API instead of Sanctum. Build a Vue.js frontend to handle login, registration, and protected routes.

13. Caching with Redis (Laravel 10)

Use Redis to cache frequently accessed data, such as product listings or category menus, to improve performance. Test cache invalidation on CRUD operations.

14. Task Scheduling and Queues (Laravel 11)

Set up a scheduled task to send daily reports of new products to admins via email. Use Laravel queues to handle email sending asynchronously.

Advanced Tasks

15. Custom Middleware for Analytics (Laravel 10)

Create a custom middleware to track user activity (e.g., page visits, product views) and store analytics data in the database. Display a dashboard with basic charts for admins.

16. **Microservices Architecture (Laravel 11 + API)**
Split the e-commerce system into microservices (e.g., authentication, product management, orders). Use Laravel API to communicate between services and integrate with a Vue.js frontend.
 17. **GraphQL API (Laravel 10 + Vue.js)**
Replace RESTful APIs with a GraphQL API using Laravel Lighthouse. Build queries and mutations for product CRUD and integrate with a Vue.js frontend.
 18. **Full-Text Search with Laravel Scout (Laravel 11)**
Implement full-text search for products using Laravel Scout with Algolia or Meilisearch. Include search filters for categories and price ranges.
 19. **CI/CD Pipeline Setup**
Set up a CI/CD pipeline for your Laravel project using GitHub Actions or GitLab CI. Automate testing, linting, and deployment to a staging server.
 20. **Performance Optimization (Laravel 10)**
Optimize the e-commerce site by implementing lazy loading for images, query optimization for product listings, and eager loading for relationships. Measure performance improvements.
 21. **Custom Package Development (Laravel 11)**
Create a custom Laravel package for a reusable feature (e.g., a notification system or analytics tracker). Publish it to Packagist and integrate it into your project.
 22. **Dockerizing Laravel Application**
Containerize your Laravel 10 or 11 application using Docker. Set up containers for PHP, Nginx, MySQL, and Redis. Deploy the app locally and test scalability.
 23. **WebSockets for Live Dashboard (Laravel 11 + Reverb + Vue.js)**
Build a real-time admin dashboard that updates product stock and order statuses using Laravel Reverb and Vue.js. Display data in a chart or table format.
 24. **Multi-Tenancy System (Laravel 10)**
Implement a multi-tenant e-commerce system where each tenant (e.g., store) has its own categories, products, and users. Use a single database with tenant identification.
 25. **API Documentation with Swagger (Laravel 11)**
Generate API documentation for your e-commerce API using Laravel Swagger or Scribe. Ensure all endpoints are documented and testable via a web interface.
-

Notes for Learning Success

- **Practice Daily:** Dedicate time each day to complete one task and review the previous day's work.
- **Build a Portfolio:** Combine these tasks into a single e-commerce project to showcase your skills. Host it on GitHub or a live server.
- **Learn Debugging:** Use Laravel Telescope or Debugbar to monitor and debug your application.
- **Read Documentation:** Refer to the official Laravel documentation, Spatie, Pusher, Reverb, and Socialite docs for guidance.

- **Join Communities:** Engage with Laravel communities on X, Discord, or Reddit to ask questions and share progress.
- **Test Everything:** Write tests for critical features to ensure reliability and learn testing best practices.

This plan covers a wide range of Laravel features, from basic authentication to advanced microservices and performance optimization. Completing these tasks will prepare you for professional Laravel development roles. Let me know if you need guidance on any specific task or want to focus on a particular area!
